43.6.2 For the purpose of determining the cash flows of marginal expenditures, the best available information must be used to portray the actual and actual current conditions, to estimate the value of investments, costs and expenses, as well as any revenues and other gains resulting from the event causing the imbalance.

43.6.3 According to any assumptions possibly defined by the INDEPENDENT VERIFIER, the GRANTOR may request that the CONCESSIONAIRE demonstrate that the amounts necessary for making new investments shall be calculated based on market values, considering the overall cost of similar works or activities in Brazil or based on cost systems that use as a supply market values of the specific sector of the project, measured, in any case, by synthetic budget, elaborated by means of expeditious or parametric methodology.

43.6.4 The actual annual Discount Rate to be used in the calculation of net present value shall be obtained in the following terms:

$$TD = 149\% \times TR$$

(i) The events causing imbalances related to investments defined by the CONCESSION MILESTONES shall consider, for calculation the recomposition of the economic-financial balance of the CONTRACT, the Discount Rate calculated on the date of signing the CONTRACT;

(ii) All other hypotheses shall consider, to calculate the recomposition of the economic and financial balance of the CONTRACT, the Discount Rate calculated on the date of the materialization of the event;
